January 2014
Prepared by Jean Montgomery**

Digital displays, signage and touch screen displays

Digital Photo Frame – about \$100.00 for a 14”

Make sure it has a slideshow mode so you would transfer pictures of our events and then it would play on the display. Transfer is either using a memory card. Some Photo Frames also have a USB connection.

LCD/LED Television – depending on size for cost

Purchase one that has USB Slide Show mode, so you can just add pictures to a flash drive and then connect it to the TV.

Touch Screen

They run about \$400.00 – this allows the patron to not have to use a keyboard. The monitor would need to be connected to a computer or another device.
